

Cedrus deodara 'Pendula'

Height	up to 5 m
Crown	broad weeping, dark, dense crown, capricious growing
Bark and branches	first grey and smooth, later becoming rough
Leaf	bundles, evergreen
Flowers	unremarkable, fragrant flowers
Fruits	reddish brown cones, 8 - 12 cm, 1 to 2 together
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	nutrient-rich, well-permeable, acidic soils
Paving	tolerates no paving
Winter hardiness zone	7b (-14,9 to -12,3 °C)
Wind resistance	moderate
Application	parks, cemeteries, industrial areas, large gardens, small gardens
Shape	clearstem tree, specimen conifer
Origin	Germany, approx. 1850

Broad, weeping cultivar with branches hanging down to the ground. If this Cedrus is not trained to grow upwards, it grows into a broad, spreading plant that is broader than it is high. If the branches are trained upwards, an irregular, broad, weeping shape develops. This makes 'Pendula' eminently suited as a solitary tree. The dark, blue-green needles grow in groups, with up to 30 bundled together. The ovoid, upright cones grow singly or in pairs and have a round top. 'Pendula' saplings are particularly sensitive to frost, requiring a sunny site sheltered from wind. Does not thrive well in high-pH soils.
