

Amelanchier arborea 'Robin Hill'

| | |
|------------------------------|---|
| Height | 5 - 10 m |
| Crown | oval, later broader, half-open crown |
| Bark and branches | grey-brown, smooth to slightly grooved |
| Leaf | reverse ovoid to oval, dark green, 3 - 7 cm |
| Autumn colour | yellow, red |
| Flowers | clusters, pink in the bud, later white, earl April |
| Fruits | first dark red, later black, small, edible fruits |
| Spines/thorns | None |
| Toxicity | usually not toxic to people, (large) pets and livestock |
| Soil type | makes very few demands on the soil, prefers calcareous soil |
| Paving | tolerates partial paving |
| Winter hardiness zone | 5a (-28,8 to -26,1 °C) |
| Wind resistance | very good |
| Other resistances | resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt |
| Application | avenues and broad streets, narrow streets, parks, squares, tree containers, cemeteries, roof gardens, industrial areas, large gardens, small gardens, patio gardens |
| Shape | clearstem tree, multi-stem treem |
| Origin | Robin Hill Arboretum, Lyndonville, New York, before 1970 |

Small tree with a striking winter silhouette thanks to the fine branching pattern. In the winter, the grey colour of the bark is striking. The reverse ovoid to oval, densely haired leaves have a pointy top and are dark green on the top and greyish green underneath. They turn spectacular yellow and red tints in the autumn. The flowers are in large, loose, pendulous clusters. When in the bud, they are pink, but turn completely white when open. The warmer the weather, the whiter the colour of the flowers. Berries appear in the autumn and turn from a dark red colour to black. 'Robin Hill' produces very little fruit. The tree has a fine root system close to the surface. It places little demands on the soil, prefers slightly calcareous soil that is not too wet.
