

Castanea sativa 'Pyramidalis'

Height	25-30 m
Crown	round, dark, dense crown
Bark and branches	brown, grey
Leaf	green
Flowers	cream white, flowers in June, July, fragrant flowers
Fruits	edible fruits, brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Paving	tolerates no paving
Winter hardiness zone	6a (-23,3 to -20,6 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, valuable for butterflies
Application	parks, cemeteries, large gardens
Shape	clearstem tree

Castanea sativa 'Pyramidalis'. A tree up to 30 m tall that is clearly distinguished from the species by its persistently narrower crown. The crown is pyramidal to conical. The heavy, squat, dark grey trunk twists on its axis taking the deep grooves in the bark with it. Young branches are olive-green but quickly turn reddish-brown. The elongated leaf is dark green and glossy and has a serrated edge. The flowers and fruit are the same as those of the species. But the tree flowers some weeks earlier than does the species. Winter hardiness zone: 6a
