

## Fagus sylvatica 'Bornyensis'

Height	15-20 m
Crown	narrow weeping, dark, dense crown, capricious growing
Bark and branches	grey
Leaf	green
Autumn colour	yellow
Flowers	yellowgreen, flowers in May
Fruits	brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	loamy soil, sandy soil, peaty soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Application	parks, cemeteries, large gardens

Fagus sylvatica 'Bornyensis' is an a-symmetrical weeping beech with an upright growing top and pendulous branches which are usually on one side. Remains narrower than the cultivar 'Pendula' that has more spreading branches. It is a stately tree with a height of 15 - 20 m. The oval to ovate leaves are green and 4 - 9 cm large. Blooms in small, inconspicuous flower catkins, less abundantly than F. sylvatica. Useful as a solitary. Prefers well-drained soil that is not too wet and that is rich in humus content. Winter hardiness zone: 5b
