

Fagus sylvatica 'Greenwood'

Height	6-8 m
Crown	oval, dark, dense crown
Bark and branches	grey
Leaf	variegated, green/yellow, yellowgreen, St. janslot
Flowers	yellowgreen, flowers in May
Fruits	brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	loamy soil, sandy soil, peaty soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Application	parks, cemeteries, large gardens
Shape	clearstem tree

Fagus sylvatica 'Greenwood' is a Dutch selection that was found in Oudenbosch (NL) in 1981. The tree grows slower than the species and has an upright growing crown. It is still unknown what the eventual height may be. The green leaf is small, circa 4 cm. In spring the leaf of the first shoot is obovate to spoon-shaped. It is green then with a light green margin. At the so-called St. Johnslot (Midsummer's day) the leaf is similar to the species. Moderate wind resistance. Winter hardiness zone: 5b
