

Juglans regia 'Broadview'

Height	15-20 m
Crown	round/spherical, half-open crown
Bark and branches	grey
Leaf	green, feathered leaf
Flowers	green, flowers in May
Fruits	edible fruits, brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	avenues and broad streets, parks, large gardens
Shape	clearstem tree, clearstem fruit tree

Juglans regia 'Broadview' is slower growing than the species and remains smaller. Height approx. 15 - 20 m. Suitable for smaller gardens. The shape of the crown, the trunk, the branches and leaves are identical to those of the species. After the emergence of the leaves the male and female flowers appear. They do not appear simultaneously. For this reason it is recommended that another cultivar, e.g. 'Buccaneer', should be planted close by to act as a pollinator. However fructification can be apomictic whereby solitary trees can also produce a reasonable quantity of fruit. Winter hardiness zone: 5b
