

Juglans regia 'Buccaneer'

Height	20-30 m, fast growing
Crown	round/spherical, half-open crown
Bark and branches	grey
Leaf	green, feathered leaf
Flowers	yellowgreen, flowers in May
Fruits	edible fruits, brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	avenues and broad streets, parks, large gardens
Shape	clearstem tree, clearstem fruit tree

Juglans regia 'Buccaneer' is a vigorous and strong grower with a broad, ascending, open crown and a height of 20 - 30 m. The trunk, branches and leaves are identical to those of the species. After the emergence of the leaves the male and female flowers appear. The flowering periods overlap so that pollination always occurs. Because it produces large quantities of pollen 'Buccaneer' is a good pollinator for other cultivars, especially 'Broadview'. 'Buccaneer' produces fruit at a reasonably young age. The fruit is particularly tasty. Winter hardiness zone: 5b
