

Liquidambar styraciflua

HAPPIDAZE 'Happdell'

Height	20 - 30 m
Crown	pyramidal, later broad ovoid, dark, dense crown
Bark and branches	dark grey, deeply grooved, corky fissures on branches and twigs
Leaf	palmately lobed, 5 lobes, glossy green, 8 - 16 cm long
Autumn colour	yellow, orange
Flowers	yellow-green, inconspicuous, April/May
Fruits	none, fruitless cultivar
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	fertile, loamy soil
Soil moisture	suitable for wet soil
Paving	tolerates paving
Winter hardiness zone	5 (-28,8 to -23,4 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Application	avenues and broad streets, narrow streets, parks, squares, cemeteries, large gardens
Shape	clearstem tree
Synonyms	Liquidambar styraciflua 'Happdell'

Strong tree with a densely branching, initially narrow pyramidal crown and long, straight central leader. When mature, the branches project more, resulting in an ovoid crown. The grey bark is deeply grooved. Young twigs are light green and covered with conspicuous corky fissures after just a few years. The leaf has 5 lobes and is glossy green. In autumn it turns brownish purple to brownish red. The leaf stays on the tree for a long time before falling. The flowers are inconspicuous. 'Hapdell' bears no fruit, making it suitable for use in residential areas and along streets. Prefers fertile, moist soil: cannot tolerate persisting drought.
