

Magnolia denudata

Height	6 - 9 m
Crown	ovoid to broad ovoid, dark, dense crown, capricious growing
Bark and branches	twigs dark brown, bark grey-brown, rough
Leaf	obovate to broadly elliptical, dark green, 7 - 15 cm
Flowers	white to light pink, about 10 cm, late March/April, fragrant flowers
Fruits	compound capsule, dark green to reddish, seeds have red husk
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	airy, well-drained
Paving	tolerates partial paving
Winter hardiness zone	6 (-23,3 to -17,8 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Application	avenues and broad streets, parks, squares, cemeteries, large gardens, small gardens
Shape	clearstem tree, feathered tree, multi-stem tree
Origin	Eastern and southern China
Synonyms	Magnolia yulan

Medium-size tree with a broad ovoid crown, up to about 9 m. This height is attained only after many years. The tree can grow to over 15 m in the wild. The young twigs initially bear hairs but lose these after the first season. The mature bark is grey-brown and feels rough. The large, vase-shaped flowers are somewhat variable in shape and colour. The petals vary in width. The flowers are usually pure white, but wholly or partially light pink forms also occur. They have a delightful, citrus-like fragrance. The tree blossoms fairly profusely even when young, making it an attractive park tree.
