

Magnolia 'Galaxy'

Height	7-9 m
Crown	round/spherical, dark, dense crown, capricious growing
Bark and branches	brown, grey
Leaf	green
Flowers	redvoilet, pinkvoilet, flowers in April
Fruits	fruitless cultivar
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Paving	tolerates partial paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Other resistances	resistant to frost (WH 1 - 6)
Application	avenues and broad streets, parks, squares, cemeteries, large gardens, small gardens
Shape	clearstem tree, feathered tree, multi-stem treem

Medium-size tree, initially with a regular, ovoid crown and a straight central leader. The crown later becomes almost round, with an eventual height of about 9 m. The flower buds only develop in spring, so they cannot freeze in the winter. The large flowers open around late April. The flower buds are a deep reddish purple. The opened flowers are deep pinkish purple on the outside and clearly lighter on the inside. They retain a narrow tulip shape for a long time, but eventually open to a broad saucer shape. Good tree for use in housing estates and on squares, thanks also to the pronounced colours and profuse blossoming.
