

Magnolia stellata 'Rosea'

Height	4-6 m
Crown	round/spherical, dark, dense crown, capricious growing
Bark and branches	brown, grey
Leaf	green
Flowers	bright pink, light pink, white, flowers in March
Fruits	redgreen
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Paving	tolerates partial paving
Winter hardiness zone	6a (-23,3 to -20,6 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	parks, squares, tree containers, cemeteries, large gardens, small gardens
Shape	multi-stem treem

Usually a big shrub but sometimes grafted onto a trunk to generate a small tree with a round crown. The slow growth means that it takes many years to develop into a tree of any size. Branches very densely, eventually becoming 3 - 4 m wide. The mid-green leaf is slightly glossy. The teardrop-shaped flower buds have soft hairs. They are visible on the plant before winter. The star-shaped flowers consist of 12 - 20 petals, bright pink on opening and becoming light pink to nearly white. Even young plants bear many flowers. Suitable for use in parks and gardens.
