

Prunus x eminens 'Umbraculifera'

Height	3.5 - 5 m
Crown	compact spherical, dark, dense crown
Bark and branches	trunk reddish-brown, young twigs silver-grey
Leaf	obovate, dark green, 3 - 5 cm
Autumn colour	yellow, orange
Flowers	white, single, Ø approx. 1.5 cm, April
Fruits	not common
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	fertile and humid
Paving	tolerates partial paving
Winter hardiness zone	4 (-34,4 to -28,9 °C)
Wind resistance	fairly
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for bees (honey plant)
Application	avenues and broad streets, parks, tree containers, cemeteries, roof gardens, large gardens, small gardens, patio gardens
Origin	South-eastern Europe to Siberia
Synonyms	Prunus fruticosa 'Globosa'

Grows to become a small tree with a compact spherical crown. Depending on the site of the graft it attains a height of 3.5 - 5 m. The crown grows to approx. 1.5 - 2 m wide and at a later age has a tendency to droop somewhat. The bark turns from grey to dark reddish-brown: young twigs have a silver-grey colour. The fairly small dark green leaves are ovoid to obovate and measure 3-5 cm. In the autumn they turn bronze-red to orange-yellow. The tree produces white single flowers in April. They grow in bundles of 2 to 4. The round red fruits, measuring approx. 1 cm, do not appear very often. The tree requires fertile and humid soil.
