

Prunus ×subhirtella 'Pendula'

Height	2-4 m, slow growing
Crown	broad weeping, half-open crown
Bark and branches	brown, grey, black
Leaf	green
Autumn colour	yellow, orange
Flowers	white, flowers in April
Fruits	black
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for bees (honey plant)
Application	parks, cemeteries, large gardens, small gardens, patio gardens

Prunus subhirtella 'Pendula' is a slow growing broad weeping form, usually grafted on a stem. The main branches spread out more or less horizontally and the young twigs are very pendulous. It forms a decorative winter silhouette. It eventually attains a height of approx. 4 m. The green leaves are somewhat larger than those of the species, their autumnal colour yellow-orange. Brief but abundant flowering period in (late) April. The flower buds are dark pink, the flowers single and pale pink to practically white. Flower diameter approx. 1.5 cm. It does not stand up to wet soil. Winter hardiness zone: 5b
