Quercus ×turneri 'Pseudoturneri'

| Height | 8 - 10 (15) m |
|-----------------------|--|
| Crown | broad spherical to round, half-open crown |
| Bark and branches | greyish-brown, grooved, twigs pale yellow and covered with felt-like hairs |
| Leaf | elongated to oval, edge lobed/serrated, green, 7 - 13 cm |
| Flowers | felt-like, greyish-white catkins, May |
| Fruits | narrow ovoid acorn, 2 - 2.5 cm, in groups of 3 to 7 |
| Spines/thorns | None |
| Toxicity | usually not toxic to people, (large) pets and livestock |
| Soil type | nutritious loamy soil, preferably moist |
| Paving | tolerates no paving |
| Winter hardiness zone | 7b (-14,9 to -12,3 °C) |
| Wind resistance | fairly |
| Other resistances | resistant to de-icing salt |
| Application | parks, cemeteries, large gardens |
| Shape | clearstem tree, feathered tree, multi-stem treem |
| Origin | England, circa 1880 |

Quercus turneri is a semi-evergreen tree, a cross between Q. ilex en Q. robur. 'Pseudoturneri' is a completely evergreen cultivar that develops from a shrub to become a sometimes multi-trunked tree with a height of 8 - 10 m. It grows upwards and later spreads out in the breadth. Young twigs are pale yellow and covered with felt-like hairs. The leaves are leathery, 5 - 13 cm long and 2.5 - 4 cm wide. They have 4 to 8 shallow lobs or serrations. On the upper side they are dark green, on the underside grey and covered with felt-like hairs. The evergreen foliage falls only after the winter, when the new leaves emerge. The remarkable flowers contrast well with the glossy dark green leaves. The long-stemmed acorns are one-third to a half enclosed by the cupule.
