

Quercus cerris 'Wodan'

Height	15 m
Crown	broad conical, later round, half-open crown
Bark and branches	twigs grey-brown to grey-brown, felt-like, bark almost black, roughly grooved
Leaf	elongated to oval, lobes are deeply dissected, dark green, 12 - 15 cm
Autumn colour	yellow
Flowers	golden-coloured catkins, 5 - 6 cm, May
Fruits	long ovoid, 2.5 - 3 cm, in groups of 1 - 4, cupule with long, narrow reflexed scales
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	preferably limy
Soil moisture	suitable for wet soil
Paving	tolerates no paving
Winter hardiness zone	6a (-23,3 to -20,6 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt
Application	avenues and broad streets, parks, cemeteries, coastal areas, industrial areas, large gardens
Shape	clearstem tree
Origin	Before 1996

Medium-size tree with a regular broad conical to round crown. With its height of around 15 m, significantly larger than 'Summer Veil'. The bark of the trunk and the heavy main branches is black-brown and roughly grooved with long bark plates. The young twigs are grey and felt-like. The leaves are elongated to oval with deeply dissected lobes. They are dissected up to five-sixths of the leaf blade, but not up to the midrib as is the case with 'Summer Veil'. The lobes are also not as narrow and less deeply serrated. In summer the leaf is dark green, turning dark yellow in autumn. The deeply lobed leaves and regular crown give the tree a striking texture. The acorns are semi-enclosed by the cupule that is densely covered with long, narrow grey-haired scales with reflexed tips. A good, healthy tree.
