

Sorbus latifolia 'Atrovirens'

| | |
|------------------------------|--|
| Height | 8-10 m |
| Crown | broad conical, half-open crown |
| Bark and branches | grey |
| Leaf | green, white |
| Flowers | cream white, flowers in May |
| Fruits | yellow, orange, red, brown |
| Spines/thorns | None |
| Toxicity | usually not toxic to people, (large) pets and livestock |
| Soil type | loamy soil, sandy soil, nutrient-poor soil |
| Soil moisture | suitable for dry soil |
| Paving | tolerates paving |
| Winter hardiness zone | 5a (-28,8 to -26,1 °C) |
| Wind resistance | good |
| Other resistances | resistant to frost (WH 1 - 6), can withstand wind |
| Fauna tree | resistant to frost (WH 1 - 6), can withstand wind, provides food for birds |
| Application | avenues and broad streets, parks, squares, cemeteries, industrial areas, large gardens |
| Shape | clearstem tree |

A frequently used, robust and fast-growing cultivar of *S. latifolia* with a broad pyramidal and remarkably symmetrical crown. Height up to 10 m. The grey trunk is smooth and the young twigs are reddish-brown with white hairs. The broad ovoid to almost round and sturdy leathery leaves are glossy dark green. On the underside they are felt-like and yellowish-grey. The young emerging leaves also bear white felt-like hairs. They remain smaller than those of the species and remain hanging on the tree for a long time in the autumn. In late May the cream-coloured flowers appear and are followed in late summer by numerous brownish-red to orange-yellow fruits. Reasonably resistant to bacterial fire blight and very wind-resistant. Winter hardiness zone: 5a
