

## Sorbus latifolia 'Henk Vink'

<b>Height</b>	10-12 m
<b>Crown</b>	narrow conical, half-open crown
<b>Bark and branches</b>	grey
<b>Leaf</b>	green, white
<b>Flowers</b>	cream white, flowers in May
<b>Fruits</b>	yellow, orange, red, brown
<b>Spines/thorns</b>	None
<b>Toxicity</b>	usually not toxic to people, (large) pets and livestock
<b>Soil type</b>	loamy soil, sandy soil, nutrient-poor soil
<b>Soil moisture</b>	suitable for dry soil
<b>Paving</b>	tolerates paving
<b>Winter hardiness zone</b>	5a (-28,8 to -26,1 °C)
<b>Wind resistance</b>	good
<b>Other resistances</b>	resistant to frost (WH 1 - 6), can withstand wind
<b>Fauna tree</b>	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
<b>Application</b>	avenues and broad streets, narrow streets, parks, squares, cemeteries, industrial areas, large gardens
<b>Shape</b>	clearstem tree

A good Sorbus latifolia selection with a faster growth rate and a narrow pyramidal crown. Height up to 12 m. The trunk is grey and rougher than that of the species: the young twigs are reddish-brown with white hairs. The broad, ovoid to almost round, sturdy, leathery leaves are glossy green and, on the underside, yellowish-green with felt-like hairs. The young emerging leaves also bear white felt-like hairs. The leaves are slightly more broadly serrated than those of the species. In late May the umbels of creamy white flowers appear. In the late summer numerous brownish-red to orange-yellow berries emerge. Fairly resistant to bacterial fire blight. Very resistant to wind. Winter hardiness zone: 5a
