

Tilia x europaea 'Wratislaviensis'

Height	30 - 40 m
Crown	broad pyramidal, half-open crown
Bark and branches	grey, grooved, twigs bare, green, later brown
Leaf	heart-shaped, broad, slightly slanted base, dark green, 5 - 12 cm
Flowers	in umbels, Ø 7 - 10 cm, flowers 3 - 11 together, yellowish-white, June/July
Fruits	round to oval, Ø 0.6 cm, greyish brown, felt-like hair
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	all
Paving	tolerates paving
Winter hardiness zone	4 (-34,4 to -28,9 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, valuable for butterflies
Application	avenues and broad streets, parks, squares, cemeteries, large gardens, windbreaks
Shape	clearstem tree
Origin	Municipal nursery, Breslau, Germany, 1898
Synonyms	Tilia x vulgaris 'Wratislaviensis'

An old cultivar that grows into a large tree with a broad, pyramidal crown. A few very heavy main branches often grow from the heavy trunk and on those irregular lateral branches grow. The bark remains thin for a long time, and later develops deep grooves. The young, emerging leaves have a remarkable bright yellow colour that turns greener later. Due to its light leaves, this tree gives the impression in the summer that it is less than healthy. The autumn colour is orange-yellow to yellow. The large leaves have a short, tapered top and serrated edge. Yellowish white flowers appear in early summer, growing 3 to 11 together in pendulous umbels. 'Wratislaviensis' is prone to aphid infestation, resulting in honeydew and sooty mould.
